Response to Amendment

The following is in response to the amendment filed March 14, 2005.

Allowable Subject Matter

Claims 1, 2, 4-19, and 21-34 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest belt structure or method of manufacturing a belt structure made from tapes of resin surrounding a fibrous matrix, whereby the tapes are applied in the CD direction and MD direction on a mandrel, pressure and heat are applied to melt the tapes, the belt is treated to set or jel, and then ground to the desired caliper.

The method of manufacturing differs from prior art methods such as in Schlueter (US 6,287,498) where belts are made by wrapping elastomer soaked fibers about a mandrel and shaped while wet before setting, or in McCormack et al (US 4,136,715) where only helical wrapping of a resin tape is taught.

The belt structure differs from belts made by the above prior art methods and from those made from laid CD filaments and/or wrapped MD filaments impregnated in resin (e.g., Gill et al (US 4,470,860)).

Response to Arguments

Applicant's arguments filed March 14, 2005 have been fully considered.

The amendments to the claims have overcome the rejections over Schlueter (US 6,287,498), set forth previously, for reasons given above.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

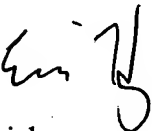

Gustafson et al (US 2004/0219346) discloses a shoe press belt made from bundled CD fibers and wrapped MD fibers embedded in a polymeric matrix.
